作业纸

1. 证：① $\sum_{j=0}^{n} x_j^k l_j(x) \equiv x^k \quad k=0,1,\cdots,n$

$\Leftrightarrow \sum_{j=0}^{n} x_j^k l_j(x) - x^k \equiv 0$

记左式为 $g(x)$，可知 $g(x)$ 最高为 n 次多项式

而令 $x = x_j \ (j=0,1,\cdots,n)$

$g(x_j)=0$ 成立，所以 $g(x)\equiv 0$

② $LHS = \sum_{j=0}^{n} (x_j^k + \cdots - C_k^1 x_j^{k-1} x + \cdots + (-1)^{k-t} C_k^t x_j^{k-t} x^t + \cdots (-1)^k x^k) l_j(x)$

$= x^k (1 - C_k^1 + \cdots + (-1)^k C_k^k)$

$= x^k (1-1)^k \equiv 0$

2. 证：① 当 $f[x_0]$ 满足

$f[x_0,x_1] = \dfrac{\frac{1}{a-x_0} - \frac{1}{a-x_1}}{x_0 - x_1} = \prod_{j=0}^{1} \left(\frac{1}{a-x_j}\right)$ 满足

假设 $n=k-1$ 时满足

$f[x_0,x_1,\cdots,x_k] = \dfrac{\prod_{j=0}^{k-1}\left(\frac{1}{a-x_j}\right) - \prod_{j=1}^{k}\left(\frac{1}{a-x_j}\right)}{x_0 - x_k} = \prod_{j=0}^{k}\left(\frac{1}{a-x_j}\right)$

成立

② $f(x) = f(x_0) + (x-x_0) f[x_0,x_1] + \cdots + \prod_{j=0}^{n-1}(x-x_j) f[x_0,\cdots,x_n]$

$+ (x-x_0)(x-x_1)\cdots(x-x_n) f[x,x_0,\cdots,x_n]$

$= RHS$

3. $f[2^0,2^1,\cdots,2^7] = \frac{1}{7!} f^{(7)}(\xi) = 1$

$f[2^0,2^1,\cdots,2^8] = \frac{1}{8!} f^{(8)}(\xi) = 0$

4. $p(x) = p(0) + x\cdot p[0,0] + x^2 p[0,0,1] + x^2(x-1) p[0,0,1,1] + x^2(x-1)^2 p[0,0,1,1,2]$

$= x^2 - x^2(x-1) + \frac{1}{4} x^2 (x-1)^2$
